Derwent Abstract: (FR2821309A) **Novelty** - The fastening system for a truck side curtain (6) with upper sliding carriages and lower tensioners (4) consists of a series of fixing points, one for each carriage and one for each tensioner, located opposite one another at the top and bottom of the curtain. The fastenings are attached to a peripheral bead in the edge of the curtain, and the lower ones are attached to the tensioners by elastic cords. When the tensioners are released and the end of the curtain is undone it can be opened by sliding the upper carriages for loading/unloading.

Use - Fastening system for truck side curtain, e.g. carrying publicity message.**Advantage** - The side curtain is easy to fit without requiring a reinforcement of the structure.
